

Plaquex Therapy

with

Dr Ola Buhr

The Vis Clinic has introduced an intravenous treatment called Plaquex Therapy.

Plaquex (a phospholipid therapy) is a natural substance and is a component of every living cell.

Plaquex therapy is most commonly utilized along with chelation to support the resolution of plaques (atheromas) from artery walls. However, Plaquex can also be used as a stand-alone therapy.

Plaquex Therapy is beneficial for conditions such as atherosclerosis, coronary artery disease, and peripheral vascular disease.

In addition, recent discoveries in the realm of neurodegeneration and biotransformation have shown that Plaquex can work to promote brain health and repair of fatty membranes
